The Missouri Room of the Baucus Federal Building is reserved for November 5 and 6 for meetings involving the East Helena Superfund Site. Please see the suggested agenda sent several weeks ago. Officials representing MDEQ and Lewis and Clark County have indicated that they prefer afternoon meetings. Thus, we are planning for EPA and the State to meet on November 5, beginning at 1:30; and for EPA, the State and Lewis and Clark County to meet on November 6, beginning at 1:30. Participants should plan to devote the entire afternoon for each respective meeting. Denver-based EPA participants plan to meet via video-conference. The agenda was constructed after deliberations among the interested agencies--EPA, MDEQ and Lewis and Clark County Health Department. Modifications, if any, should be sent before November 1.

Earlier this year, recommendations were made to provide additional information. The technical team has been gathering and interpreting the additional information over the past few months, and all agreed that as much of the information as possible should be distributed prior to the meetings. Therefore, over the next two weeks, you should expect to receive pertinent memos, data summaries and the like. Tomorrow, I will mail to each of you the following materials for review. Please bring your copies to the upcoming meetings.

1. October 9, 2003, memo and map prepared by Doug Dollhopf and others, MSU, entitled: Estimated Area in Helena Valley Where Total Soil Lead Concentrations Exceed 1,000 mg/kg (Map 1).
2. September 30, 2003, memo and map prepared by Doug Dollhopf, MSU, entitled: Estimated Area in Helena Valley Where Total Soil Lead Concentrations Exceed 500 mg/kg (Map 2).
3. September 30, 2003, memo prepared by Doug Dollhopf, MSU, entitled: Comparison of Sector Closure Areas and Kriged Isopleth Lines for the 500 mg/kg and 1,000 mg/kg total Soil Lead Concentrations.
4. October 22, 2003, memo prepared by Scott Brown, EPA, with 3 figures attached, for consideration together with Dollhopf's comparison of closure areas and kriged data.
5. October 22, 2003, memo prepared by Doug Dollhopf, MSU, entitled: Supplement - Explanation of Total Soil Lead Distribution in Helena Valley.
6. October 9, 2003, memo and map prepared by Doug Dollhopf and others, MSU, entitled: Estimated Area in Helena Valley Where Total Soil Arsenic Concentrations Exceed 100 mg/kg and 176 mg/kg (Map 3).

Additional information is forthcoming.
